

Strong room

EN 1143-1

Class I to IX

**Quick to install,
in complete discretion**
Modular and welding free,
classes I and III

Thanks to our modular installation system, no need to request "fire authorisation" for welding works. The Hartmann Tresore strong room is composed of screwed panels. The units are made-to-measure so as to avoid any obstacles present and to hug the walls of the location perfectly, on all 6 sides, like a second skin. The unit is assembled in just a few days, in complete discretion.

Outstanding strength

Designed using new, intelligent materials, pushing the limits of mechanical resistance.

Unrivalled light weight

The Hartmann Tresore strong room can be installed on upper floors, without jeopardising the foundations of your site.

Complete finesse

The finesse of the walls maximises internal space.

Panic Room
**Strong room
for the home**
Faced with an increase in "homejacking" incidents, your home-installed Hartmann Tresore Panic Room will protect your most valuable possessions, beyond material assets: you and your family.

Bespoke vault door in a solid frame

Configured to your requirements, before being built-in using heavy-duty masonry at the entrance to the space you want to protect.

Anti-intrusion system with instant-block mechanism **Vault-style locking system**

Sensitive to the slightest intrusion attempt, the informer system triggers the rods to block instantly and definitively: your vault door is sealed.

Customised opening method:
single or multiple, your choice of options (key, electronic, digicode, badge, disk, biometry, etc.)
Possibility to connect to an alarm and access control system.
